Create a document reflecting on your project data limitations and metrics.

- Were there any limitations that prevented you from conducting an analysis? Think of these in terms of a future project or wish list (i.e., “If I had x, I would have been able to do y.”).

We don’t have data on Alaska and District of Columbia. The reasons for the data unavailability were also not mentioned. In the future It would be great to have access to those missing data to make for a complete data analysis. We also don’t have data on the number of staffs available from the agency.

- Did your data have any limitations that may have affected your results? Consider this in terms of data quality and data bias.

Yes, some states had very little to no data. So, the results we have had will affect how the agency will plan its staff allocation.

- How might you monitor the impact of the staffing changes you recommended?

Through survey from the hospitals, medical personnel, and constantly monitoring data updates from the government agencies.

- Is there a metric that could be used for monitoring this impact.

Data from Total Deaths occurring in each state.
